

# PRODUCT OVERVIEW

## Identity Document Scanning

# Identity Document Scanning

A solution that reads and extracts data from identity documents across the globe.

It replaces form filling with a fast and easy scan, eliminating the need to manually enter PII or upload a photo from any ID.

## STEP 1

A user places or holds the document in front of the camera.

## STEP 2

They then flip it over if there is data on the other side.

## STEP 3

The results are extracted and the user can move forward.

# Why choose Identity Document Scanning?

**Fast and easy** - our simple UX powers quicker onboarding and better conversion rates than manual form filling.

Support for **over 2,000** global identity document types. [Here's the full list.](#)

**Automatic** detection, recognition, and classification of any identity document.

**Customizable UI** - modify fonts, colors and icons to match your brand.

**High accuracy** rates of extracted ID data, compared to manual entry.

**Precise image cropping** of any identity document.

**On-device** processing of extracted data means you're in absolute control of your customers' data (i.e., no third-party processing).

# Fully-automated data extraction

Identity Document Scanning doesn't require preselection for document type or country.

Real-time error messages guide users step by step through the scanning flow, asking them to move the document closer or farther away from the camera, or focus on its barcode.

# Multiple integration options

Once you've decided to replace manual data entry with Identity Document Scanning, you'll need to choose the integration type that best suits the needs of your business - and your users.

Right now those include:

A native integration with your mobile app

A cross-platform integration with your mobile app (e.g., ReactNative, Cordova, Xamarin, Flutter and Capacitor)

A cloud-based API integration

An API integration using your own infrastructure

A browser-based integration with your website or web app

## About Microblink

We build intelligent, easy-to-use AI solutions that automate identity verification for various industries and use cases. In addition to providing seamless user experiences for your customers, our solutions significantly mitigate security risks while complying with various industry and regional regulations.

With Identity Document Scanning, users can scan and extract data from over 2,000 identity documents across 138 countries, as well as over 1,500 different payment cards. In addition, when you add our liveness detection feature - which ensures a real person is performing the scan - you can be more confident the person signing up for your services is who they claim to be.
